Education

Manipal University Jaipur
B. Tech CSE
CGPA: 7.01

September'22 – May'26

Work Experience

Nucleus Software

May'25 – Aug'25

Software Developer Intern

(on-site) Delhi

- Engineered a portfolio of three enterprise fintech applications to automate financial data analysis and resource management for 12 company clusters, replacing high-error, manual Excel processes.
- Established a key data reconciliation feature that cross-referenced projected, accrual, and system allocation data for over 500+ employees, providing senior leadership with resource utilization and data integrity.
- Architected a secure full-stack solution (Spring Boot, React) to process and manage a high-volume Oracle database with over 1,000,000 financial records, optimizing queries to achieve millisecond data retrieval speeds.
- Designed and deployed role-based dashboards for 8 Project Managers, providing secure, tailored access to sensitive financial and personnel data, reducing manual reporting time by an estimated 95%.

Nagarro Mena LLC

May'24 – July'24

Software Developer Intern

(on-site) Dubai, UAE

- Achieved a 15% increase in React-based UI performance and a 10% reduction in page load times by implementing robust state management, optimizing front-end assets, and refactoring code for a more efficient, component-driven architecture.
- Enhanced backend performance by 30% using Python and Flask, improving API response times from 250ms to 180ms.
- Enforced OWASP Top 10 security protocols to mitigate vulnerabilities and strengthen overall application security.
- Optimized project delivery by implementing Agile sprints, leveraging Git for precise version control, and fostering robust team collaboration.

Projects

-Smartsolve AI:

Tools: JSX, TypeScript, API, Redux, Flask

- Created a React.js and Flask-based AI-powered web app, integrating Gemini API and Redux for state management, improving query resolution speed by 40%.
- Prepared a modular front-end using RESTful principles, Redux, and React Hooks for efficient state management.
- Implemented robust OAuth 2.0 authentication aligned with OWASP standards to ensure high-level security.

-Nexpend-AI powered Financial Tracking System:

Tools: Python, Oracle Database, Tesseract OCR, Dialogflow, Flask

- Implemented an AI-integrated web application for automated financial document processing and transaction querying.
- Leveraged Tesseract OCR to extract financial data from scanned bills, cheques, and receipts, storing results in a structured Oracle database.
- Improved financial data entry efficiency and accuracy by automating manual processes, reducing human error significantly.

-Crop Price Prediction:

Tools: XGBoost, LightGBM, Random Forest, Gradient Boosting

- Predicted crop prices using ensemble machine learning models on a dataset of 45,000+ entries.
- Performed rigorous data preprocessing, including handling missing data and encoding categorical features.
- Conducted advanced feature selection and hyperparameter tuning (GridSearchCV/RandomizedSearchCV), achieving an R^2 score of 0.98.

Skills

Programming Language: Python, C++,Java, JavaScript

Framework and Libraries: React, Flask, Redux, Django, Node.js, Bootstrap, Tkinter, XGBoost, LightGBM, Random Forest, Gradient Boosting

Tools and Software: Git, MySQL,Oracle Database, Linux (Ubuntu), Windows

Certifications

Oracle: Java Foundations (2023) – Covered Java programming fundamentals

IBM: Generative AI Fundamentals

Udemy: Complete Web Development 2024 Bootcamp

RedHatAcademy: RH134RedHatSystemAdministration for OS

Extra-Curricular

Association of Computer Machinery (ACM)

2022 – 2024

- Advanced from an organizing committee member to a leadership role in the organizing committee at ACM, leading a team of 10+ members. Engaged stakeholders across platforms, driving 1,500+ event interactions.
- Coordinated team to improve collaboration and boost event participation by 30%, demonstrating leadership and project management.
