

MAANAV GHAI

Full-Stack AI Engineer | Java • Spring Boot • Angular • Spring AI • RAG • LLMs

+91 9560186823 | maanavg14@gmail.com | github.com/maanav098 | linkedin.com/in/maanavghai | maanav-ghai-portfolio.vercel.app

Summary

Full-stack AI engineer shipping production enterprise systems (Java, Spring Boot, Angular) at Infosys, where I build Spring AI and retrieval-augmented generation (RAG) features into live applications, leading a 4-member team across 8 microservices. Focused on applied AI engineering: LLM integration, embedding-based retrieval and evaluation-driven pipelines, grounded in a track record of measurable delivery, including 1M+ record database systems, 95% reporting-time reductions and enterprise fintech platforms serving 12+ company clusters.

Skills

AI/ML: Spring AI, RAG (Retrieval-Augmented Generation), LLM Integration (Gemini, Llama3/Ollama), Prompt Engineering, Embedding-Based Semantic Search (nomic-embed-text), spaCy/NLP

Backend: Java, Spring Boot, Spring Cloud, Spring Security, FastAPI, Node.js, Flask, REST APIs, Microservices, API Gateway, JWT

Frontend: Angular, React, Redux, Next.js, Tailwind CSS, shadcn/ui

Core CS: Data Structures & Algorithms, Object-Oriented Design, System Design Fundamentals, Unit Testing, CI/CD Awareness (Jenkins, SonarQube)

Languages / DB / Tools: Python, C++, TypeScript, SQL | MySQL, Oracle, SQLite | Git, Postman, AWS, Power BI

Work Experience

Infosys | Digital Specialist Engineer (Java Full-Stack, Spring AI/RAG)

May 2026 – Present

(On-site) Mysore, India

- Engineered Infy LearnX, an enterprise learning platform, on Java 21/Spring Boot microservices and Angular, architecting a Spring AI and RAG retrieval pipeline behind an API Gateway to power contextual, AI-assisted learning features
- Leading a 4-member trainee team on Infy LearnX feature delivery, coordinating sprint planning, code reviews and integration testing
- Implemented JWT-based authentication and role-based access control, and audited and corrected REST/DTO contract mismatches across 8 backend microservices
- Delivered an automated certificate-issuance workflow spanning course-completion tracking, persistence, duplicate prevention and public verification, validated by 22 passing automated tests

Nucleus Software | Software Engineer Intern

Mar 2026 – May 2026

(On-site) Delhi, India

- Implemented business validations across 4 configurable rule-engine components (rule, condition-builder, parameter and rule-detail tables) and PL/SQL-based validation logic for a Loan Origination System (LOS) used by a Mumbai-based banking client
- Worked directly with the client to clarify requirements, provide delivery updates and run knowledge-transfer sessions, strengthening cross-team communication

Nucleus Software | Software Developer Intern

May 2025 – Aug 2025

(On-site) Delhi, India

- Engineered a portfolio of three enterprise fintech applications (Java, Spring Boot, React) automating financial data analysis and resource management across 12 company clusters, replacing manual Excel-based processes
- Architected a secure full-stack solution to query and manage an Oracle database of 1M+ financial records, tuning queries to achieve millisecond retrieval, and shipped role-based dashboards for 8 project managers that cut manual reporting time by an estimated 95%

Nagarro Mena LLC | Software Developer Intern

May 2024 – Jul 2024

(On-site) Dubai, UAE

- Improved React-based UI performance by 15% and reduced page load times by 10% through state-management optimization and component-driven refactoring
- Enhanced backend API performance by 30% (250ms → 180ms average response time) using Python and Flask, and enforced OWASP Top 10 security protocols across the application

Projects

IntPrep – AI-Powered Interview Preparation & Evaluation Platform

- Architected an AI-native interview platform (FastAPI, Llama3/Ollama) that parses resumes via pdfplumber/spaCy to drive adaptive, role-specific question generation across multiple job categories
- Built a hybrid evaluation engine combining 3 scoring signals (keyword matching, embedding-based semantic similarity via nomic-embed-text, and LLM-generated feedback) with an analytics module scoring responses against role-specific rubrics

Nexpend – AI-Powered Financial Tracking System

- Built an AI-integrated web app using Tesseract OCR to extract structured data across 3 document types (bills, checks, receipts) into an Oracle database, automating financial data entry and cutting manual error

Education

Manipal University Jaipur

Sept 2022 – May 2026

B.Tech, Computer Science Engineering | CGPA: 7.19

Certifications

Oracle: Java Foundations · IBM: Generative AI Fundamentals · AWS: Cloud Practitioner Essentials

Extra-Curricular

- Advanced within ACM from organizing-committee member to a leadership role, managing a team of 10+ volunteers and driving 1,500+ event interactions across platforms
- Coordinated team processes to improve cross-functional collaboration, boosting event participation by 30%
